We provide here two xpzs:

1. TravelAgency_BeforeDesignSystemDefault.xpz: contains the status of the KB when the video starts. If you haven't been working with the KB, then create a new one, import this xpz and run. You will have the KB in a state very similar to the one at the beginning of the video.

2. TravelAgency_AfterDesignSystemDefault.xpz: contains the complete status of the KB at the end of the video.
