GeneXus 16

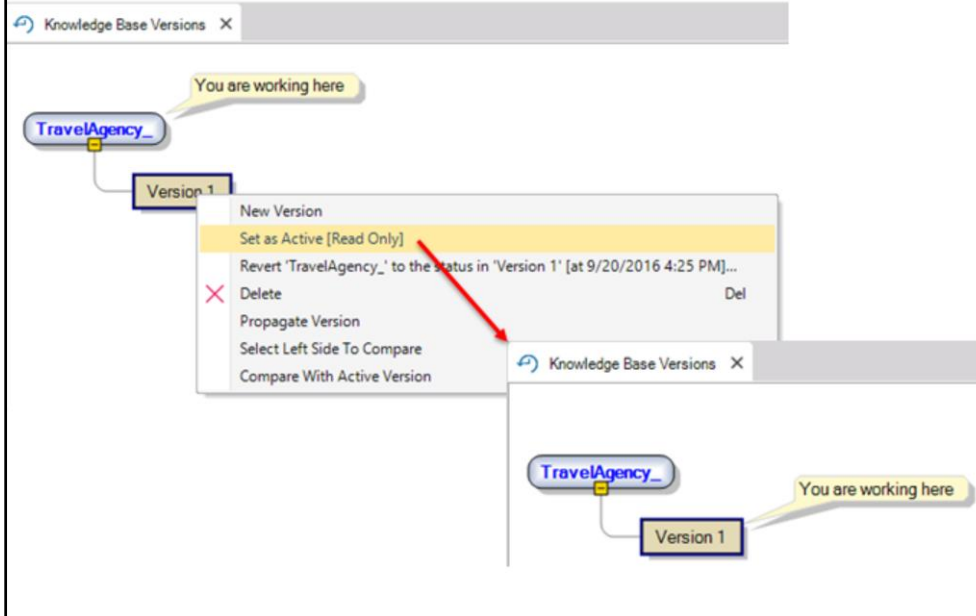

To create a frozen version of the KB...

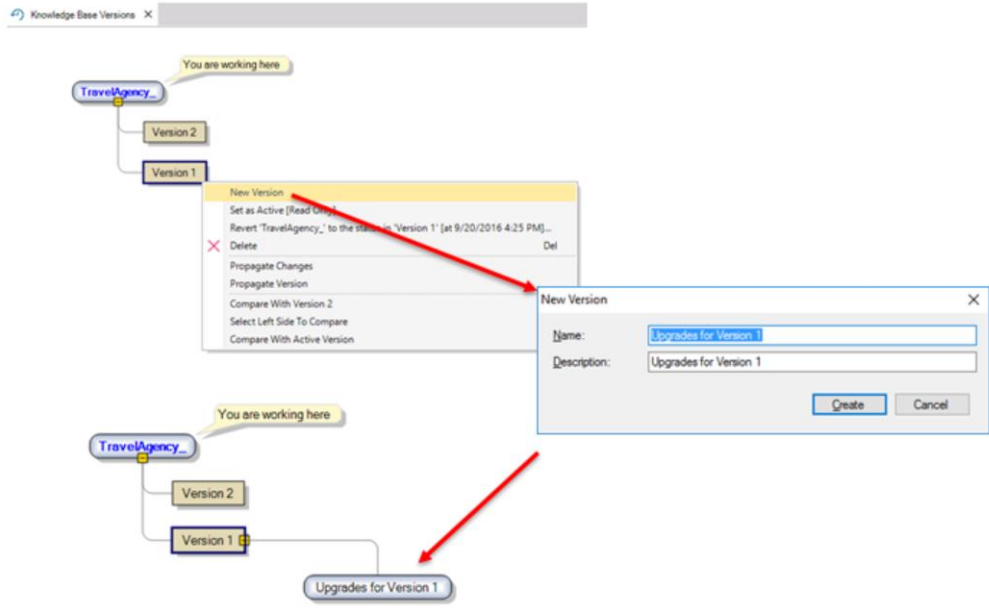

- Right-click on the root node and select Freeze:

To work with a frozen version:

To create an editable version from a frozen version:

To synchronize (merge) two development versions:

The screenshot illustrates the process of merging two development versions in the GeneXus Knowledge Base. It shows a tree view with a node labeled "TravelAgency" and a context menu open over it. The menu options are: Freeze, Delete, Propagate Changes, Propagate Version, Select Left Side To Compare, and Merge Versions. A red arrow points from the "Merge Versions" option to the "Merge Versions" tab in the bottom pane. The "Merge Versions" tab is active and displays the following information:

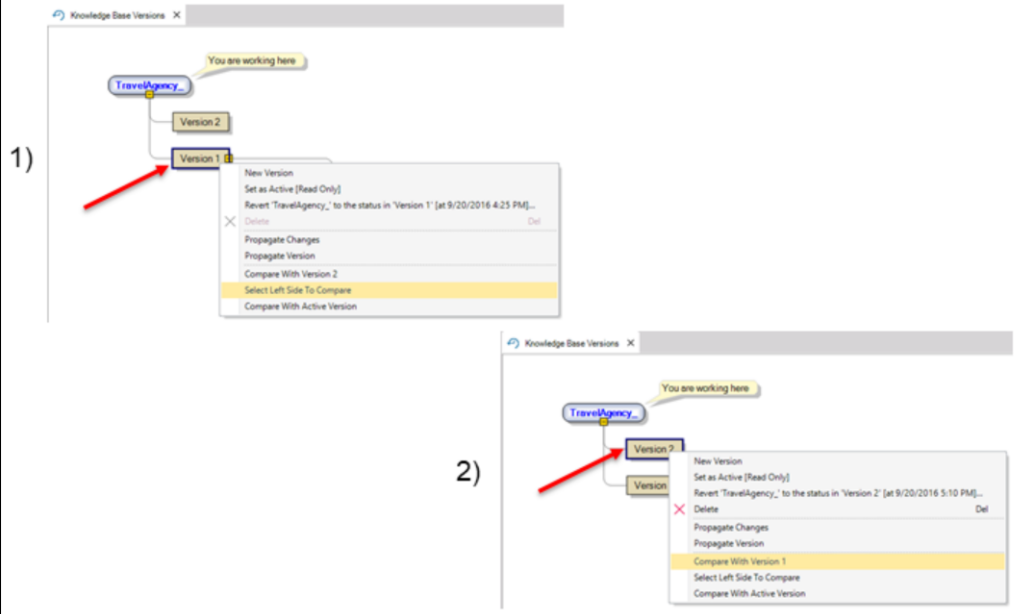

Merge Versions

Merge in: changes made to: since:
using Version 1 as reference

☒ Backup target before merge

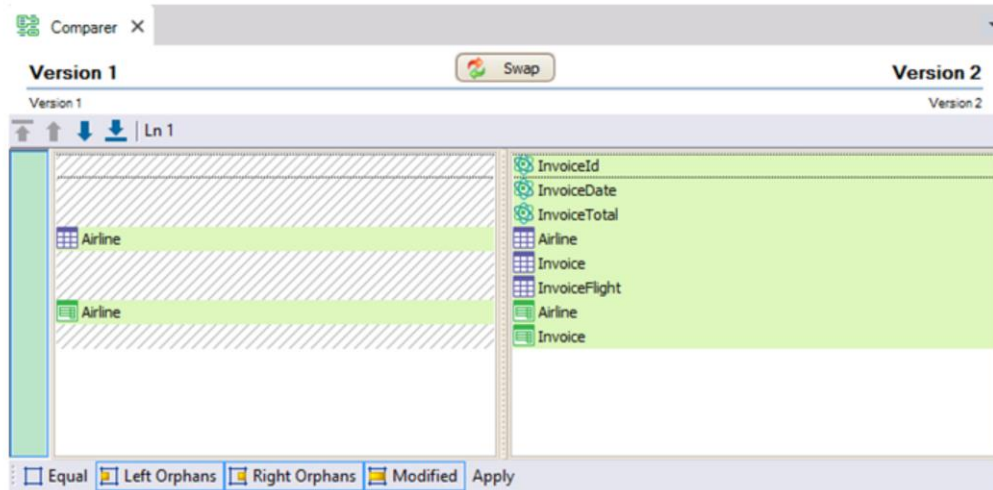

<input checked="" type="checkbox"/>	Name	Type	Action
-------------------------------------	------	------	--------

To compare two versions:
