

GeneXus Enterprise AI Backoffice

Alejandra Caggiano

GeneXus Enterprise AI provides a backoffice to perform essential tasks for managing projects and settings.

GeneXus Enterprise AI Backoffice

Unlock the possibilities of AI

GeneXus Enterprise AI is the backbone that connects companies with LLMs in a monitored and cost-effective way, providing agility to embrace the power of Generative AI.

You can easily customize projects, define and test wizards, generate API tokens, manage members, and adjust observability options.

GeneXus Enterprise AI Backoffice

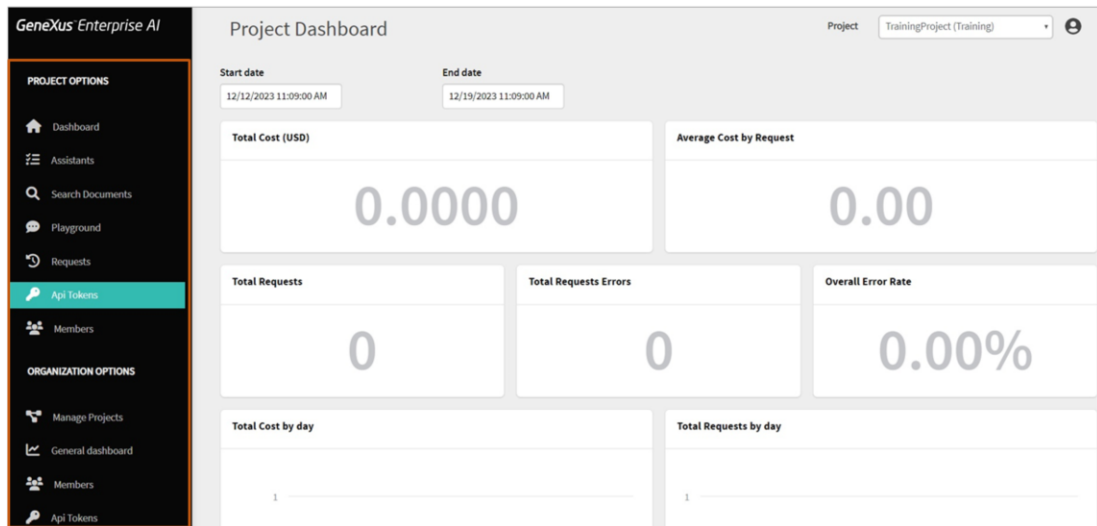

Let's access this backoffice.

First, we see a panel showing indicators related to the usage and costs of the selected project.

From here, it is possible to select the project, and from there filter all the information displayed on the panel and the options offered in the menu on the left.

Next to the project name, we also find a user menu to access specific tasks and other settings.

GeneXus Enterprise AI Backoffice

OK. Here we have the backoffice menu, which offers access to different functionalities depending on the credentials of the logged-in user, both to manage the organization and to manage their projects. Projects are the central entities where different configurations and settings are defined, including the ability to define wizards, generate API tokens, and perform document management tasks within the organization.

As for the organization, depending on the credentials of the logged-in user, it is possible to manage projects and members, generate API tokens, access general indicators, etc.

In addition, GeneXus Enterprise AI stores and tracks every request made through its APIs, providing organizations with full visibility into the use of wizards, artificial intelligence models, and the cost associated with each request.

This enables organizations to monitor and analyze resource usage, make informed decisions about the allocation of those resources, and optimize usage to achieve cost-effectiveness.

By leveraging these features, organizations can maintain control over their artificial intelligence infrastructure, identify areas for improvement, and make data-driven decisions to improve operational efficiency.

GeneXus Enterprise AI Backoffice

The screenshot displays the 'Organization Projects' interface in the GeneXus Enterprise AI Backoffice. The sidebar on the left is divided into 'PROJECT OPTIONS' and 'ORGANIZATION OPTIONS'. The main content area features a 'CREATE NEW' button, search filters for 'Project Name' (with a 'Start with' dropdown and 'tr' input) and 'Status' (set to 'Active'). Below these filters is a table with the following data:

Organization	Project	Description	Status		
Training	TrainingProject	GeneXus Enterprise AI Course	Active	UPDATE	USAGE LIMITS

Navigation controls for the table are visible at the bottom right of the table area.

So, let's start with project and member management.
