		3	Endfor		

We often need to know and have information about the changes that have been made to an object, and who made those changes. For example, in a work team, find out who committed a certain line, the revision of the last modification, and the date.

The Blame option allows obtaining all this information.

Blame in GeneXus Server

ame	Туре		
Country	Country		
P CountryId	Numeric(4.0)		
- ? CountryName	Character(20)		
🔄 CountryFlag	Image		
Error("Enter th	ne Country name		

lew attri	ibute and rule	in Country tra	nsaction.					Recert Comments.
Pending Co	mmits (5/5) Ian	ored Objects						Y
3	Name		Description	Modified On	Module	Local State	Last Synchronized	User
8	Carmine	Theme for Web	Carmine	4/9/2018 14:51		Modified	9/7/2018 10:08	ARTECHacaggiano
8	Country	Transaction	Country	4/9/2018 15:23	Root Module	Modified	9/7/2018 11:11	ARTECHacaggiano
1 - 23	CountryFlag	Attribute	Country Flag	4/9/2018 15:22		Inserted	9/7/2018 10:08	ARTECHlacaggiano
0 🕏	English	Language	English	4/9/2018 14:51		Modified	9/7/2018 10:08	GeneXus
0 🖥	WWOrderItem	Theme Class	WWOrder Item Selected	4/9/2018 14:51		Modified	9/7/2018 10:08	GeneXus

Let's go to GeneXus and see an example:

In the WorldCup KB we will make some changes to the Country transaction. We will create the new attribute CountryFlag, of Image type, and also state a rule to control that the country name is entered:

Once the changes have been saved, we send them to the server. We select Team Development, add the corresponding comment, and press the Commit button.

ntry					
ne up to: 💽 Conveit #4 - 4/9/2010 15-40 - Gereikus Accountieceppiero					
ture	🖥 Web Form 💰 Win For	m Rules Events Variables Help Docum	entation Patterns Properties		
8	Author	Name	Туре	Description	
2	admin	Country	Country	Country	
	demm	- Y CountryId	Numeric(4.0)	Country Id	
		- P CountryName	Character(20)	Country Name	
4	acaggiano	- = CountryFlag	Image	Country Flag	

Now, we open another developer's IDE, KB WorldCupDiego.

To access the Blame option, we right-click on the Country transaction and in the KB Explorer window we select Development / Blame.

Wiki Output	SII 21				
Team Development	✓ Blame				
	Color 1	255; 255; 255			
Build	Color 2	255; 255; 192

	Blame				
×					

Then, the changes made by each developer can be seen in each sector of the object.

As for editing the indicator colors, it is possible to customize them from Tools / Options, selecting Team Development / Blame.
