# Course introduction
SAP and SAP ERP

Before starting the course, let's make sure we know what we are talking about when we talk about SAP and SAP ERP.

What is SAP?

SAP is a German company that develops business systems and solutions.

.

What is SAP?

Process log

Information display

Financial and logistics core

Regardless of the industry (pharmacy, textile, construction, etc.), all companies record their processes in a similar way. Companies always require their accounting and logistics operations to be recorded and subsequently displayed.

In response to this need, SAP created the financial and logistics core.

What is SAP ERP?

What do we mean when we talk about SAP ERP?

What is SAP ERP?

ERP
Enterprise Resource Planning

SAP ERP
SAP Solution

An ERP is Enterprise Resource Planning software. It allows you to replicate various business scenarios and store the execution in a database. The data can then be queried to generate reports and indicators for decision-making.

SAP ERP is the solution provided by SAP that integrates the experience of developing solutions for recurring business processes such as sales, procurement, accounting, and costing, among others.

GeneXus by Globant

GeneXus for SAP Systems

What option does GeneXus offer?

GeneXus™

Agile development platform

Low - code

Future proof

In this context, GeneXus has created an agile, low-code, and future-proof development platform that enables companies to create native and customized software experiences leveraging SAP technologies.

So, let's introduce the GeneXus for SAP Systems solution.

GeneXus™
