

Managing quotas per project

Alejandra Caggiano

We have previously seen what a Project is, as well as how to create it and associate Members with it.

Now we'll see that once a Project is defined, it is possible to configure quota limits to control project expenses or usage. To do this, you must have the Organization role.

Managing quotas per project

Organization Projects

Project: TrainingProject (Training)

CREATE NEW EXPORT Project Name: Start with tr Active: true

Organization	Project	Description	Active			
Training	TrainingProject	Project for the GeneXus Enterprise AI Course	✓	UPDATE	DELETE	USAGE LIMITS
Training	TrainingResources	Este proyecto define asistentes para tareas internas de Capacitación.	✓	UPDATE	DELETE	USAGE LIMITS

Page 1 of 1 Filtering by Project Name and Active

We go to the platform, and from the menu, below the Organization options, we select Projects. As we already know, we see the list of defined projects, and from here, the possibility to manage quota limits for each of them.

Managing quotas per project

Quota Limit (Project TrainingResources)

Project: TrainingProject (Training)

CREATE NEW EXPORT

Status: All

Defined on	Status	Membership	Unit	Soft limit alert	Hard limit	Used	Remaining	Renewable?
No records found								

Quota Limit (Project TrainingResources)

General Information

Entity Name: Project

Description: TrainingResources

Status: Active

Membership: Freemium

Unit: Requests

Soft limit alert *: 0

Hard limit *: 0

CONFIRM CANCEL

Therefore, we select the desired project and click on Usage limits. We click on Create new.

It is possible to define quota limits based on:

- Membership, which can be Freemium, daily, weekly, or monthly.
- Unit, which can be based on cost in dollars or per request.

When a Membership is assigned a Freemium value, it means that it allows a one-time use, a free trial, or a specific limit of requests or costs without an expiration date.

In addition, you can define a soft limit and a hard limit alert for each quota limit.

When the value defined in the Soft Limit alert is reached, an email notification is sent to the project manager.

Also, when the Hard Limit value is reached, the platform will not allow the request to be executed and will record the error.

Finally, the Renewable option allows indicating if the Quota Limit can be renewed, and this will be possible as long as the Membership value is

different from Freemium.

As for the status of the quota limit, it can take three values:

- Active
- Expired
- Empty

When the set hard limit is reached, the quota status changes to Empty.

In the case of projects with active quotas, it is not possible to define new quotas. In this situation, it is necessary to edit the active quota and change its status to Expired.

In addition, you will be able to see the amount of available quota and the amount used.

Good. Next, we will work with API tokens.
