

GeneXus Server

Web console

GeneXus[™]

Console web

GeneXus Server has a web console that simplifies teamwork by providing users with general and specific information about a knowledge base. This information includes all objects with all their parts, including their structure, Form, events, variables, etc.

It also allows knowing the status of the entire project, viewing the latest changes and activity of the KB, and editing its main document.

GeneXus Server login

The image displays two side-by-side screenshots of the GeneXus Server login interface. Both screenshots feature the GeneXus Server logo at the top, with the tagline 'Team development for GeneXus'. The left screenshot shows the 'Authentication Type' dropdown menu set to 'Local'. Below this, there are input fields for 'Username:' and 'Password:', a checkbox for 'Remember me on this computer', a blue 'Sign In' button, and a link for 'Help: I forgot my password'. The right screenshot shows the 'Authentication Type' dropdown menu set to 'GeneXus Account'. It includes the same 'Username:' and 'Password:' fields, 'Remember me' checkbox, and 'Sign In' button. Additionally, it has two links: 'Help: I forgot my password' and 'Don't have an account? Create one now'.

LOGIN

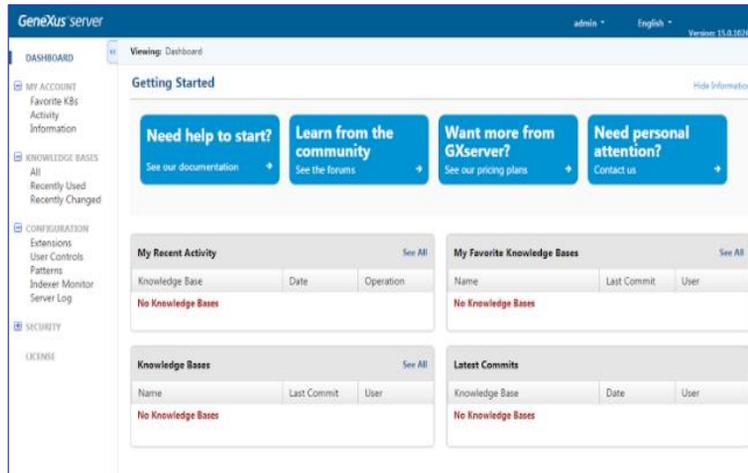

This console can be configured with or without authentication features. If authentication is enabled, the login box will appear, showing two types of authentication:

- Local
- or GeneXus account

The Local option allows users to access the console with their corresponding username, and the GeneXus Server security database is used to validate the credentials.

On the other hand, the GeneXus account option allows users to log in to the console with their GeneXus account. It also gives users the possibility to create an account if they don't have one.

GeneXus Server Dashboard

The dashboard displays the entire contents of the GeneXus Server instance. It is made up of different sections, including the start section, navigation tree and the section with all the information of the knowledge bases.

The Getting Started section offers help to users in case they need it. It can be hidden or expanded, and consists of the following four buttons:

- **Need help to start?:** Takes the user to the official documentation of GeneXus Server.
- **Learn from the community:** Takes the user to the official forum of GeneXus Server.
- **Want more from GeneXus Server?:** Takes the user to the official page of the GeneXus Server product.
- **Need personal attention:** Enables the user to communicate with the GeneXus Server support team.

GeneXus Server Dashboard: Navigation tree

Let's see the navigation tree. From this section, you can access each part of the GeneXus Server console. The tree structure may vary depending on whether the logged in user is an administrator, and whether it is an online instance of the server.

Let's see what these options refer to:

- My Account: Information about the logged in user.
- Knowledge Bases: All the knowledge bases on the server.
- Configuration: Information about the configuration of the instance.

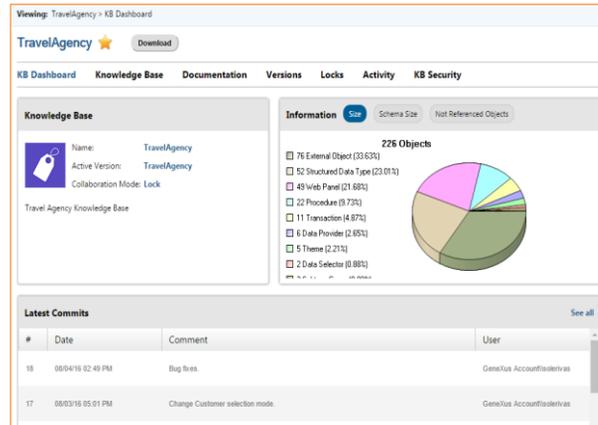

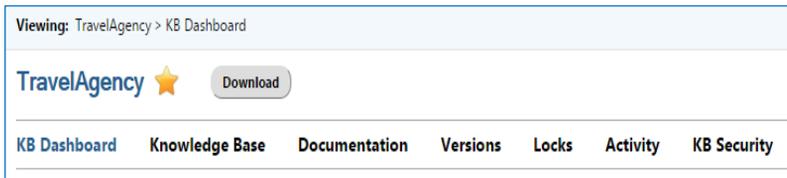

If the logged in user is an Administrator, the following nodes are also displayed:

- Security: User and security administration of the server instance.
- License: Authorization of the GeneXus Server license.

In addition, if it is an online instance of GeneXus Server, the following nodes are also displayed:

- Backups: Refers to the backup of each knowledge base hosted on the GeneXus Server instance.
- Service: General information about the service provided by the GeneXus Server instance.
- Support: Refers to the User controls and installation of Patterns of the GeneXus Server instance service.

GeneXus Server Dashboard: Knowledge Base menu

Ok, let's move on to Knowledge Base menu

This menu offers all the information related to the knowledge bases hosted on the server instance. It also allows the user to navigate the knowledge base through the different tabs:

Let's see what these tabs do:

KB Dashboard: Displays general information about the knowledge base, including the number of objects, the number of unreferenced objects, and the list of the last commits made. It is also possible to modify the description of the KB and its active version, and to associate an image that identifies it, etc.

Welcome to Travel Agency KB documentation

This Knowledge Base represents the development of an application for a travel agency, which will have a web module, one for smart devices. It will have a workflow and queries. The intention is to guide these developments, through the corresponding GeneXus courses offered at <http://training.genexus.com>

To achieve this goal, we have created several development versions, each of which develops into a branch of the application (New! Versions), to be later integrated into the trunk.

KB version	Course Name	Link
Basic Version	GeneXus Course	http://training.genexus.com/cursos-genexus-78/cursos-genexus-100?es (spanish)
	Course	http://training.genexus.com/genexus-course/genexus-course?es (english)
Extended Version	GeneXus in Deep Course	http://training.genexus.com/profundizacion-en-genexus/profundizacion-en-genexus?es
	Course	(under construction)

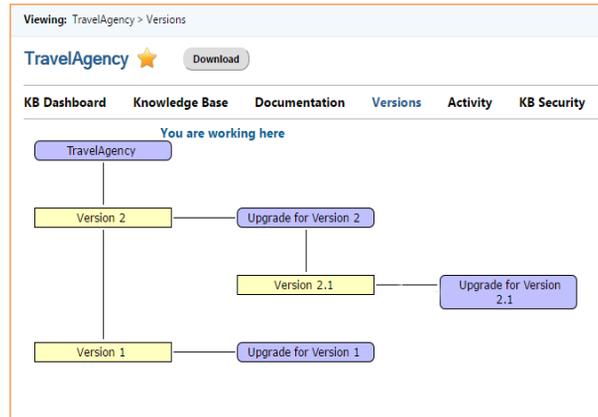

Documentation: Allows the user to view and edit the knowledge base documentation that has been created from the GeneXus IDE itself.

From To

#	Date	Comment	Operation	User
6	06/21/16 05:39 PM	Saved by Web	Commit	local\admin
5	06/03/16 05:17 PM	Procedure ChangeAttractionsname changed and DataSelector FindAttraction added	Commit	GeneXus Account\solerivas
4	06/03/16 04:37 PM	ChangeAttractionsName Procedure added	Commit	local\admin
3	06/03/16 04:33 PM	ChangeAttractionName Procedure added	Commit	GeneXus Account\solerivas
1	06/01/16 02:09 PM	Send KB	Publish	GeneXus Account\solerivas

Activity: Lists all the information and activity associated with a knowledge base. Each item in this list shows the number, date, comment, and name of the operation, as well as the details of the user who performed it. These operations can be as follows:

- Commit
- Update
- Publish
- Save by Web: This option is applicable when the knowledge base was modified directly from the server. The operation will be viewed as a Commit, but the comments will specify that it was saved through the web, as shown in the image.

KB Dashboard Knowledge Base Documentation Versions Activity KB Security

Groups Users

Groups	Users	Permissions
solerivas	GeneXus Account	Full Control, View, Update, Commit, View Documentation, Edit Documentation, Manage Security, Manage Versions, Delete, Manage Locks, Commit To Protected Versions
admin	local	Full Control, View, Update, Commit, View Documentation, Edit Documentation, Manage Security, Manage Versions, Delete, Manage Locks, Commit To Protected Versions

Lastly, **KB Security**: Allows the logged in user to manage the permissions assigned specifically to Groups and users on a knowledge base. The items in the list vary depending on whether the Groups or Users tab is selected:

The Groups tab, as we can see, displays the group's name and permissions on the knowledge base.

In turn, the Users tab shows the username and permissions on the KB.

Finally, please keep in mind that changes made to security at the level of one knowledge base will not affect the security of other knowledge bases. This means that if permissions are assigned to a group or user from the KB Security section, they will apply only to that particular KB.
