GeneXus by Globant

What is GeneXus for SAP Systems?

GeneXus for SAP Systems is a Software Development Platform that allows for the fast generation of software applications in multiple languages and platforms, starting from a single specification.

It offers multiple advantages: it's easy to learn and highly productive.

GeneXus for SAP Systems

JAVA Applications

Responsive Web Applications (HTML5 & CSS3)

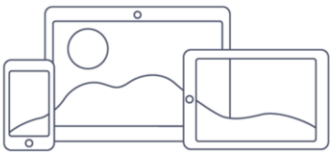
Native Mobile Apps for iOS and Android

Fiori UX Apps

SAP HANA® in-memory database

Certified integration to SAP ERP through standard and custom BAPIS

Deployment to SAP Business Technology Platform



GeneXus by Globant

single developer will be able to automatically generate and maintain all the relevant technologies required to work around a SAP system.

Today, this means generating applications with the following features:

- Java
- Web Responsive (HTML5 & CSS3), and/or
- native mobile for iOS and Android
- following Fiori design guidelines
- applications that create and maintain SAP Hana databases
- they can be integrated into SAP ERP through standard or customized Business APIs (BAPIs) ot other mechanisms.
- In addition, applications are automatically deployed to SAP Business Technology Platform..
