GeneXus™
for Students

GeneXus Online University

GeneXus Online University

Adapt your institution to the new paradigm

Educational institutions today must adapt to a new reality, which is to provide distance training. Since not all institutions are equally prepared for this challenge, we at GeneXus want to reach out and support you with our online training experience.

What We Offer?

To teach students to develop software in a short time in a fully online course.

The program includes the following:

Self-study online training + Online forum + Live online classes + Online exam + *GeneXus Learning License*.

In a 4-week online program, students will be taught both theory and practice, as well as online classes to review the main topics and prepare for the final exam.

Students who pass the exam will be awarded an internationally valid certificate as GeneXus for Students Analyst. Their names will be featured on the certified technicians page.

https://training.genexus.com/en/learning/certifications/certified-technicians

Students will be able to post their profile on our career opportunities website

(*https://www.genexus.com/en/community/jobs*) and browse job offers at international companies.

In addition, we offer Ask Me Anything (AMA) sessions to answer questions from users in various fields. They are led by our GeneXus experts and address varied topics such as Artificial Intelligence, BlockChain, ChatBots, Mobile Platforms, Application Design, among others.

How is it implemented?

Those interested in participating should register with the assigned local instructor. When they confirm their reservation, they will receive a curriculum of topics to study each week, access to the forum, and the schedule of online classes.

Why is it important for students?

The consulting firm Gartner estimates that in 2024 more than 65% of the business applications created all over the world will be developed with low-code platforms. Learning the tools of the future today will make a huge difference for tomorrow's engineers.
