What is GXportal?

WHAT IS GXPORTAL?

The first question that comes to mind is: **What is GXportal?**

GXportal is a tool for creating and maintaining websites, including corporate, professional and custom-made websites.

No programming skills are required. Basic IT skills are enough.

One of GXportal's distinctive features is its ability to adapt to users' needs, as well as to continuous technological change.

Your website can be optimized for mobile devices. As a result, GXportal will detect if it is being accessed from a mobile device in order to redirect users to the corresponding website.

In addition, native applications can be generated for Android and iOS, and be made available for download from the stores.

GXportal is available in two editions: CORPORATE GXPORTAL and ONLINE GXPORTAL.

CORPORATE GXPORTAL is installed on the client's server, using their infrastructure.
It is available for Windows in .Net with SQL Server, and for Linux in Java with MySQL, DB2, SQL Server and Oracle.

ONLINE GXPORTAL includes hosting and software. To start building your website, you only need a browser and an Internet connection.

GXPORTAL ONLINE offers various plans. Even though all of them provide the same design characteristics, the features available vary depending on the selected plan.

The **"Free" Plan** allows you to create and publish websites free of charge. Note that the GXportal logo appears in the footer of all pages.

The **"Starter" Plan** offers the same features as the previous plan. The only difference is that the GXportal logo is removed from the footer of the published pages.

The **"Basic" Plan** allows you to register users. A Login feature can be added to the website, with the possibility to assign permissions to logged-in and anonymous users.

In addition to identifying users, the **"Professional" Plan** allows you to create all the necessary roles.
* For example, if the website belongs to a university, the following roles can be created: "Faculty", "Students", "Directors", etc.
* In an industrial environment, the following roles can be defined: "Employees", "Customers", "Suppliers" and others.
This plan also allows sending newsletters and creating online forums.

The **"Enterprise" Plan** provides all the GXportal features, including user workflow and the possibility to integrate wikis.
